

SeSys

Networked Vision Solutions

SeSys is a leading supplier of digital IP camera systems (CCTV), specialising in turnkey rapid deployment camera solutions for security surveillance, disaster response, incident monitoring, public order situations and for monitoring explosive and hazardous environments.

SeSys have been committed to providing digital IP cameras and networked vision solutions since 2004. From concept to commission, SeSys have frequently helped businesses to develop, design and deploy systems that meet their exact needs and provide the most cost effective solution.

The SeSys Differential

We provide true high resolution digital IP cameras that are PoE compatible and designed to operate over standard IP networks and industry connectivity. These cameras are optimized for remote site use and deliver the highest possible image quality. The specification of the SeSys cameras far exceeds many digital cameras and most analogue cameras and will capture images up to 30 times higher resolution than conventional CCTV systems. All images are produced with a time and date stamp and this detail and quality ensures they can be used as evidence in a court of law.

Our cameras require no software installation, no licence fee, can be deployed in hazardous environments and with low power consumption they offer a wide range of deployments and give a rapid return on investment.

One example is the SeSys multi award-winning Torch Camera; a rapid deployment kit (RDK) that incorporates a high resolution digital IP camera, storage, router and battery. Connecting via a 4G/3G/GPRS/wireless network, the Torch Camera delivers pictures via web browser to wherever they are required - control room, alarm receiving centre, police car, office PC, smartphone, iPad, etc - allowing potentially hostile and

critical situations to be monitored remotely. The Torch Camera can be hand-held or mounted onto a vehicle, pole, wall or corner of a building. Cameras can be installed and operational within minutes and relocated at a moment's notice in response to fast changing situations.

SeSys also has a range of intrinsically safe/explosion proof ATEX and IECEx standard cameras, allowing hazardous environments and situations to be monitored safely from alternative locations.

Typical Deployments

SeSys platforms with their extraordinary video quality, wireless capabilities, ruggedized exterior and secure data transmission make them invaluable in a multitude of deployments. Listed below are some typical scenarios:

- **First Responders / Emergency Services** – SeSys lightweight, low powered, web based camera systems, provide secure, portable surveillance equipment to enable emergency services to identify imminent threats and evaluate risks in real time
- **Law Enforcement & Security Services** – High resolution images are created via rapidly deployed, stand- alone systems that require remote monitoring. SeSys solutions produce high resolution images with the ability to stream video data over encrypted mobile networks and secure Wi-Fi. The system can be set up to record activity in specific areas of interest or to continuously capture and record all activity
- **Construction Industry** – Short term deployment solutions, without the complication of setting up fixed line power and data connections. SeSys platforms produce images that can be viewed both locally and remotely to allow the management of capital equipment, tools and raw materials and to prevent theft. Areas of interest, such as high-value assets or site entrances, can be set to trigger recording when activity is detected. Images can be accessed at any time via a PC, smartphone or tablet
- **Utility Services** – Rapidly deployed camera units can monitor and record on site activity. Troublesome areas can be automatically monitored, recording specific areas as required. Any on site activity can raise an alarm, deliver high-resolution, evidential quality images and allow the monitored area to be viewed live and reviewed later
- **Transport Services** – Unmanned depots and stations can be continually monitored and any activity recorded. Triggered alarms can alert the site manager who can instantly review the event before deciding how to respond. For other solutions that require a short term deployment such as work monitoring, traffic surveys or infrastructure management, SeSys provide wireless solutions that can be deployed within 15 minutes and quickly relocated as required
- **Petrochemical Industry (and other hazardous environments)** – Where visual monitoring is required and may be subjected to a build-up of flammable gasses, liquids or dust, SeSys offer a range of cameras that meet the ATEX and IECEx standards for Zone 1 and Zone 2 classification

Why SeSys?

SeSys provide camera solutions from conception to commission and beyond. Our expertise in visual monitoring provides our customers with the best solutions to suit every requirement.

- A Mobotix Solutions Partner since 2005
- Extensive experience of IP cameras installations and wireless systems
- The market leaders in high-resolution, low power, wireless solutions
- Platforms proven in the most hazardous conditions
- Turnkey solution provider from installation and commissioning through to configuration and support

SeSys - Networked Vision Solutions
