

PRESS RELEASE

SeSys introduce Stainless Steel ATEX Camera

SeSys we have broadened their range of ATEX Cameras with the introduction of Stainless Steel Camera units.

SeSys range of intrinsically safe ATEX and IECEx compliant high resolution digital IP cameras are used in many industries, such as industrial production lines, combined sewage outlets, warship magazines, and the oil and gas installations.

To compliment this range of ATEX units, the SeSys Stainless Steel ATEX housing can be used in more corrosive environments that could exclude the use of other less durable materials.

The new ATEX Stainless Steel cameras enclose a variety of Mobotix high resolution IP cameras and include a built in SD Card for image recording that can store from anywhere between 8Gb and 64Gb.

These cameras can be accessed over a network using any standard internet browser or by installing the Mobotix MxControlCenter video management software on a local PC or workstation. The MxControlCenter can connect to any number of Mobotix cameras at any locations to provide a straightforward and powerful video management system with centralized or local, user-based operation and evaluation.
